### PROFESSIONAL SUMMARY

Backend-focused Full-Stack Engineer with hands-on experience building scalable RESTful APIs, distributed architectures, and interactive user interfaces using Node.js (Express.js), Java (Spring Boot/Microservices), and React.js. Adept at bridging the gap between client-side state management and robust server-side data persistence.

### CORE TECHNICAL SKILLS

- **Backend Frameworks:** Java, Spring AI, Spring Boot, Spring Cloud (Microservices), Node.js, Express.js
- **Frontend Frameworks:** React.js, JavaScript (ES6+), HTML5, CSS3
- **Databases & Tools:** Git, GitHub, Postman API Client, RESTful API Design, PostgreSQL, Hibernate, MongoDB
- **Agentic AI Tools:** LangChain, LangGraph

### EXPERIENCE

#### Intern, Megatron Workstation

### PROJECTS

#### Edutech Microservices Application (Ongoing)

*Java, Spring Boot, Spring Cloud, Eureka, API Gateway*

- Engineered a distributed financial platform using a decoupled Spring Boot microservices architecture to isolate system capabilities.
- Implemented service registration, discovery orchestration, and dynamic path routing using Spring Cloud Gateway and Eureka Service Discovery.
- Built secure intra-service messaging pipelines to pass structured ledger payloads between accounting logic blocks.

#### Dishify (Backend Done, but Ongoing)

*Node.js, Express.js, JavaScript, React.js*

- Developed a complete web solution coordinating full-stack data mutations through an automated Express.js backend and modular React.js rendering layers.
- Structured uniform JSON payload schemas across custom API endpoints to securely update interface states during user actions.
- Programmed transactional routing flows that optimize asynchronous database updates for state preservation.

#### Golf Charity Application

*Node.js, Express.js, JavaScript*

- Architected server environments processing core logic workflows, user donation matching rules, and active campaign aggregation.
- Crafted clean REST endpoints connecting internal application queries to specialized operational metrics.

#### Card Validation API

*Node.js, Express.js, Algorithms*

- Implemented a single-endpoint micro-utility executing high-performance data verification workflows using the Luhn Algorithm.
- Designed clean HTTP error response mappings providing instant structure validation feedback.

#### Secure Geofenced Attendance Microservice Platform (Ongoing)

*Java, Spring Boot, express.js, Spring Data JPA, PostgreSQL, Geolocation API, RESTful APIs, JWT*

- Architected a secure, multi-tenant university attendance backend with 4 isolated service domains to eliminate proxy attendance and buddy-punching.
- Engineered a real-time geofencing validation engine using the Haversine formula to verify student physical presence within lecture hall radius coordinates.
- Implemented strict database-level unique constraints and device-session safeguards to prevent duplicate check-ins and unauthorized remote logging.
- Designed flexible open-directory course registration and co-teaching models supporting institutional workflows, electives, and carryover management.

#### Autonomous Multi-Agent Research Pipeline

*Python, LangGraph, Groq, Tavily API, BeautifulSoup, Trafilatura*

- Architected a multi-agent research pipeline (Search, Reader, Writer, Critic) with rate-limiting safeguards and recursive execution controls.
- Engineered robust web scraping fallbacks and strict timeout handlers to ensure fault-tolerant data extraction.

**EDUCATION: B.Sc. Computer Science** — Obafemi Awolowo University (OAU), Osun State, Nigeria
